Step-by-Step Guide to Logging into Matillion on AWS

Step1: Login with google account: I already have a user account, but its trial period has expired. So, We need to log in to a new user account

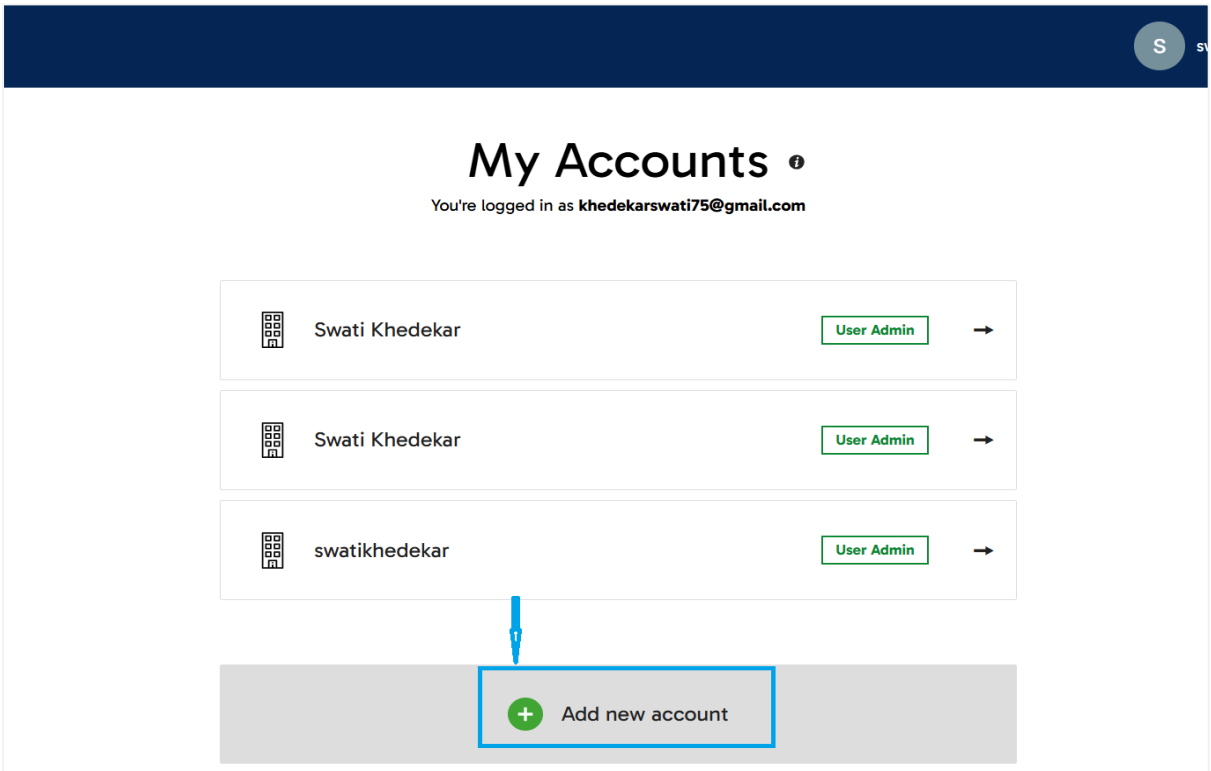

Figure 1: User Account page

Step 2: Fill region and continue

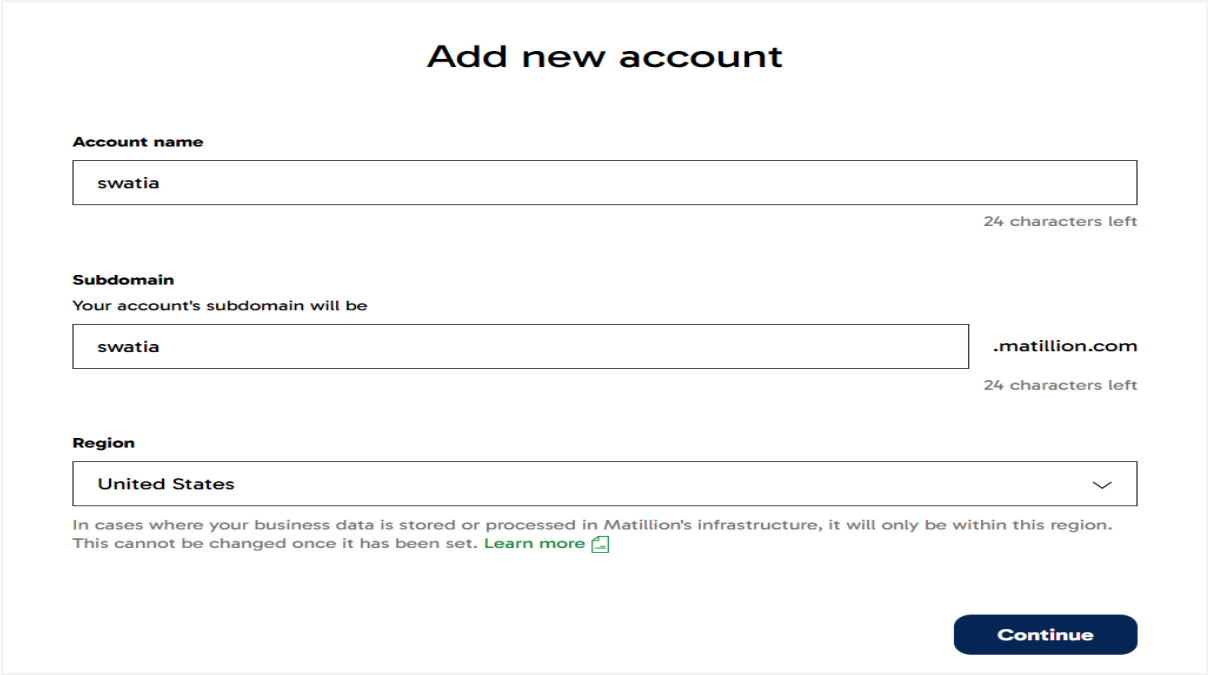

Figure 2: Add account and region

Step 3: After successfully created account click to open.

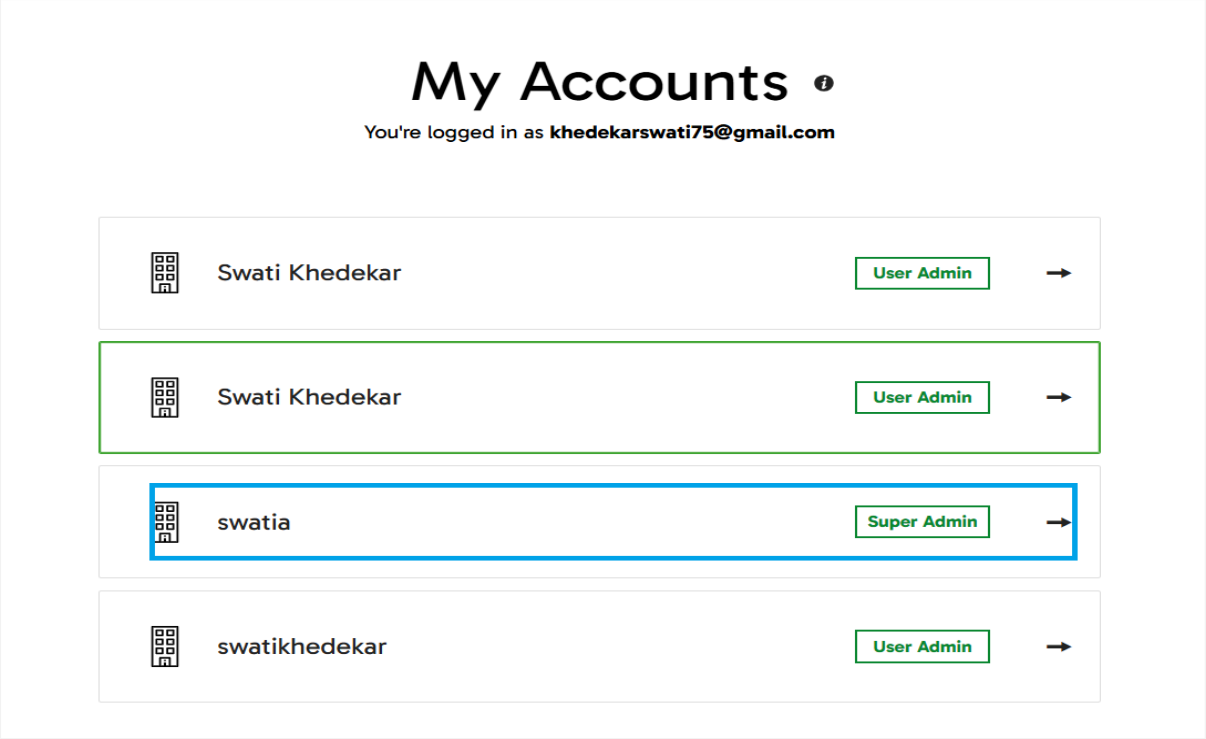

Figure 3: Select and Open Account

Step 4: After opening a new account, a 14-day trial with 500 credits is activated.

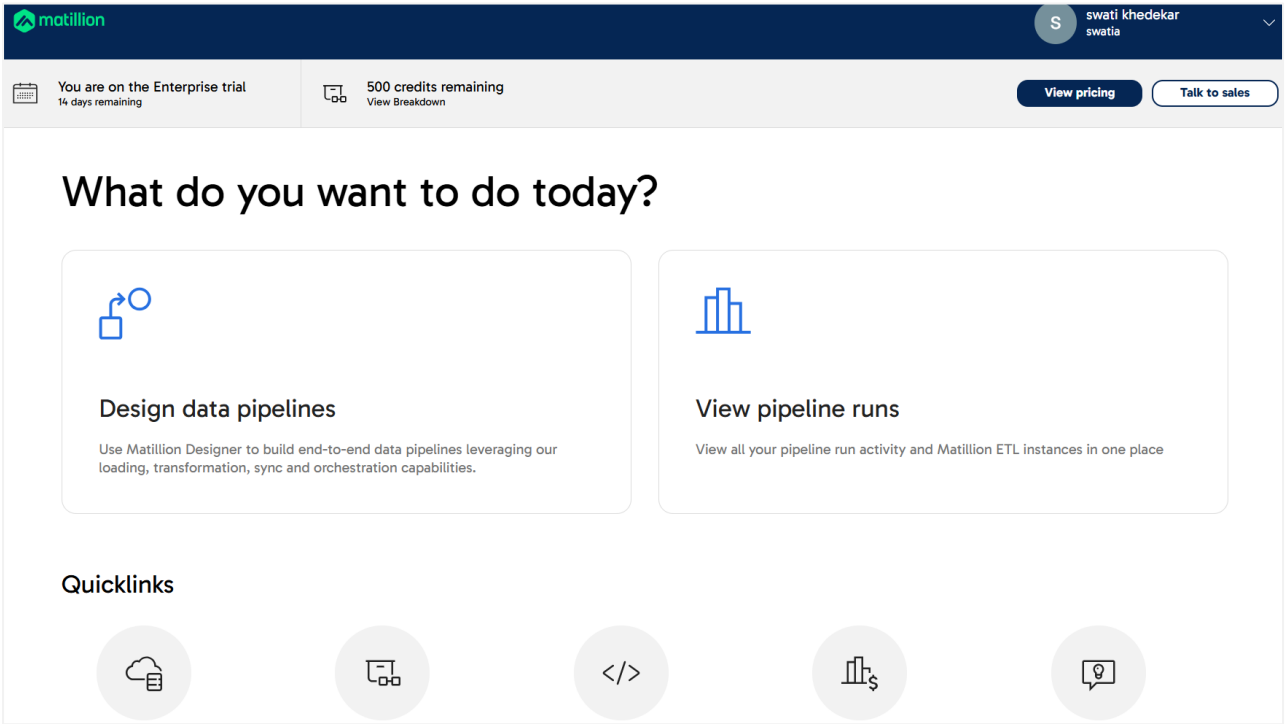

Figure 4: New Matillion dashboard

Step 5: Now you will land into Matillion dashboard. There scroll down and select ADD MATILLION ETL INSTANCES.

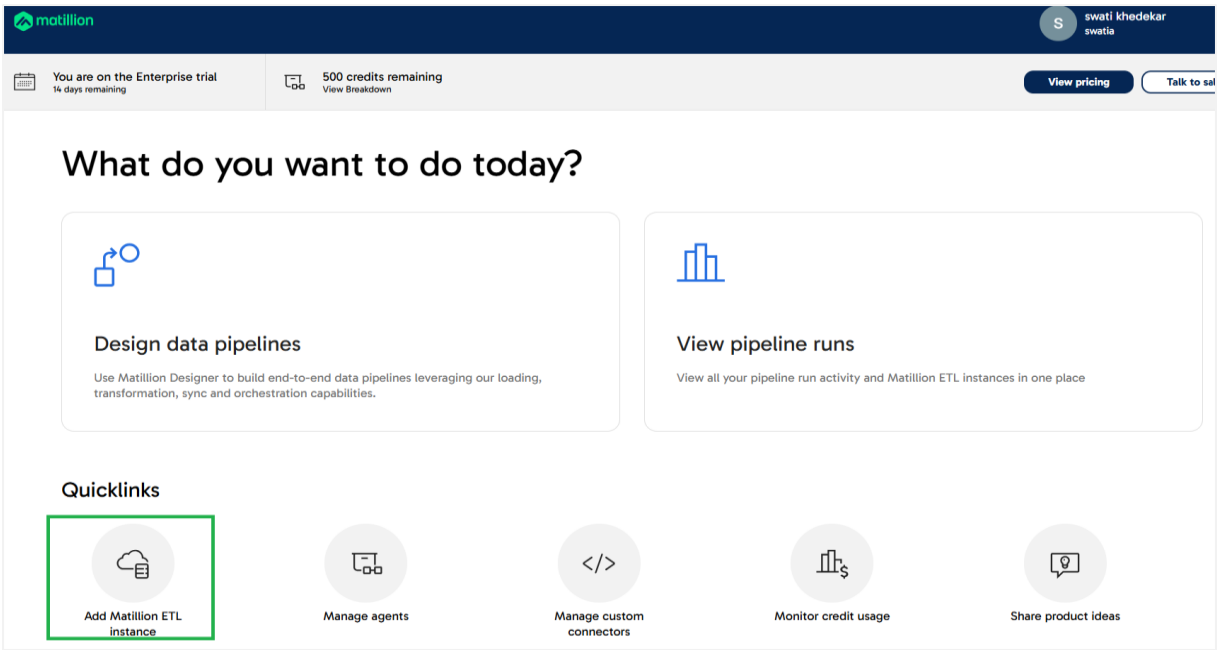

Figure 5: Add Matillion ETL Instance

Step 6: Now choose the cloud provider as per your preference. Here, we will proceed with AWS Cloud.

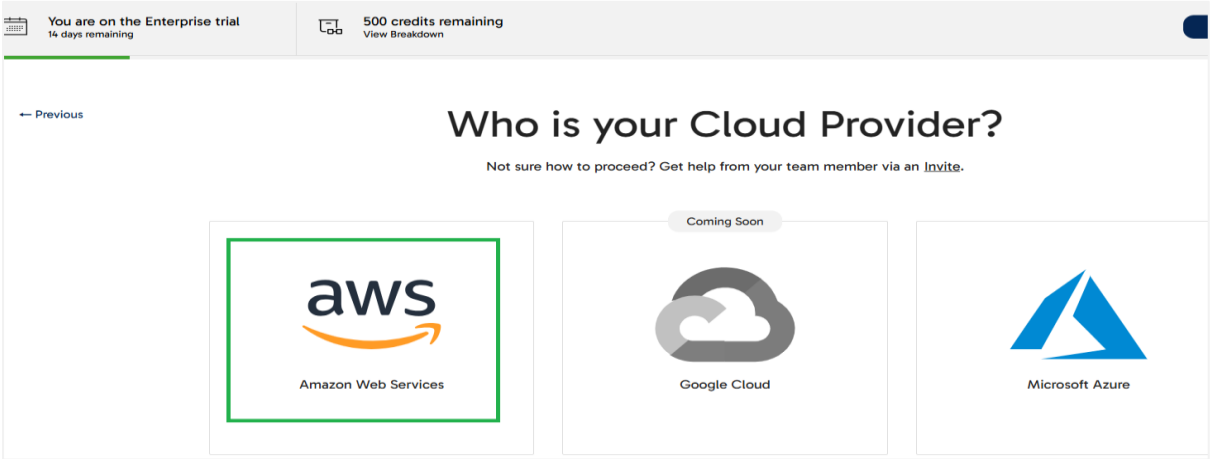

Figure 6: Add Cloud provider

Step 7: Select Cloud Data Platform. Choose Snowflake here.

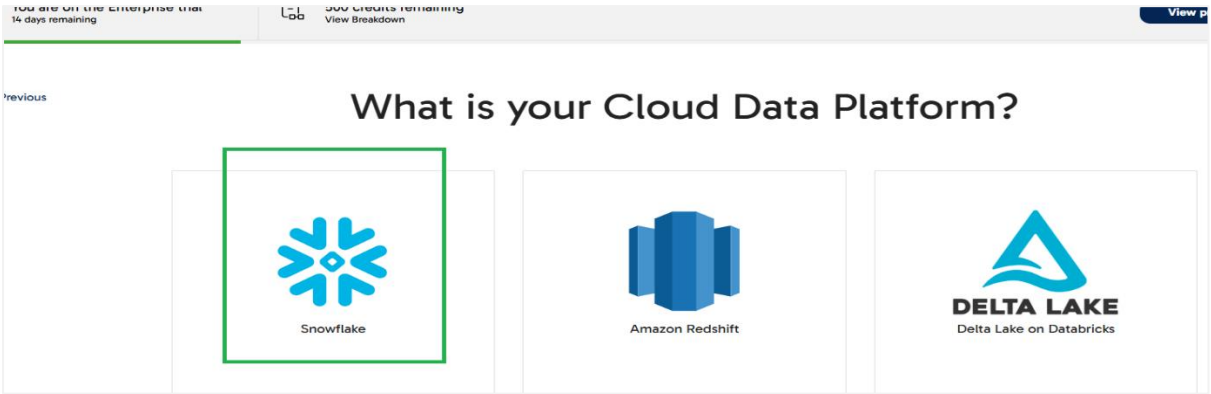

Figure 7: Choose Cloud Data Platform

You can go with another platform as well but since we are going to use snowflake here so better to choose snowflake.

Step 8: Now choose the delivery way for Matillion ETL for snowflake. (Here will go with CloudFormation Template).

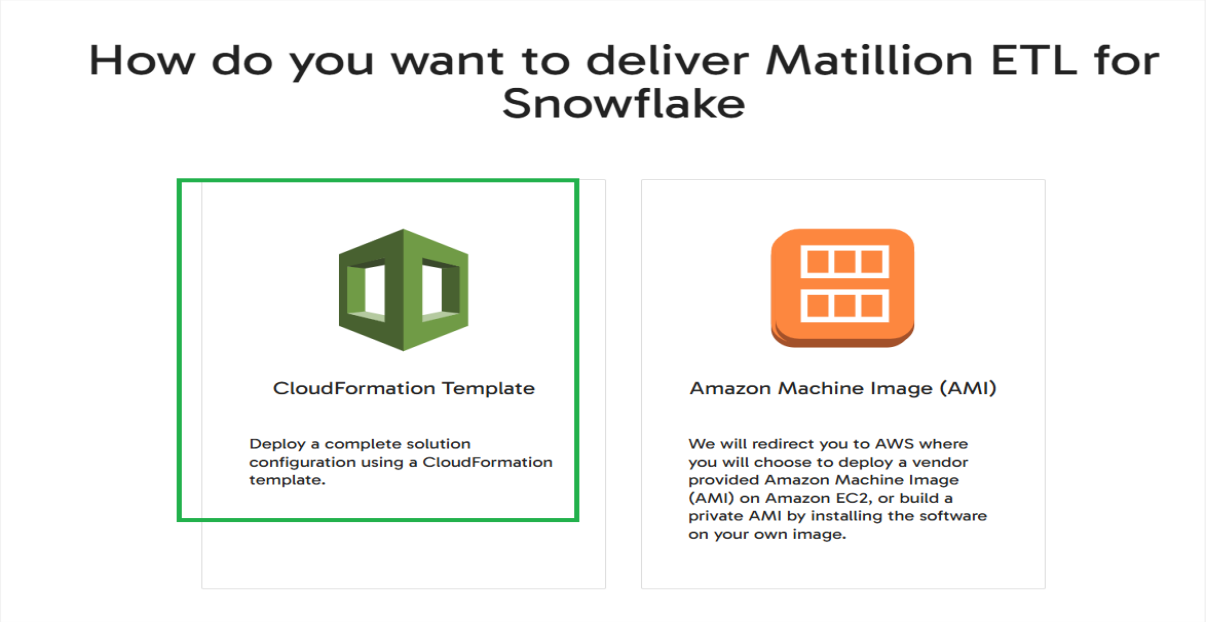

Figure 8: Select the delivery way for Matillion ETL for snowflake

Step 9: Select the region where you want to run the Matillion. Here selecting US WEST.

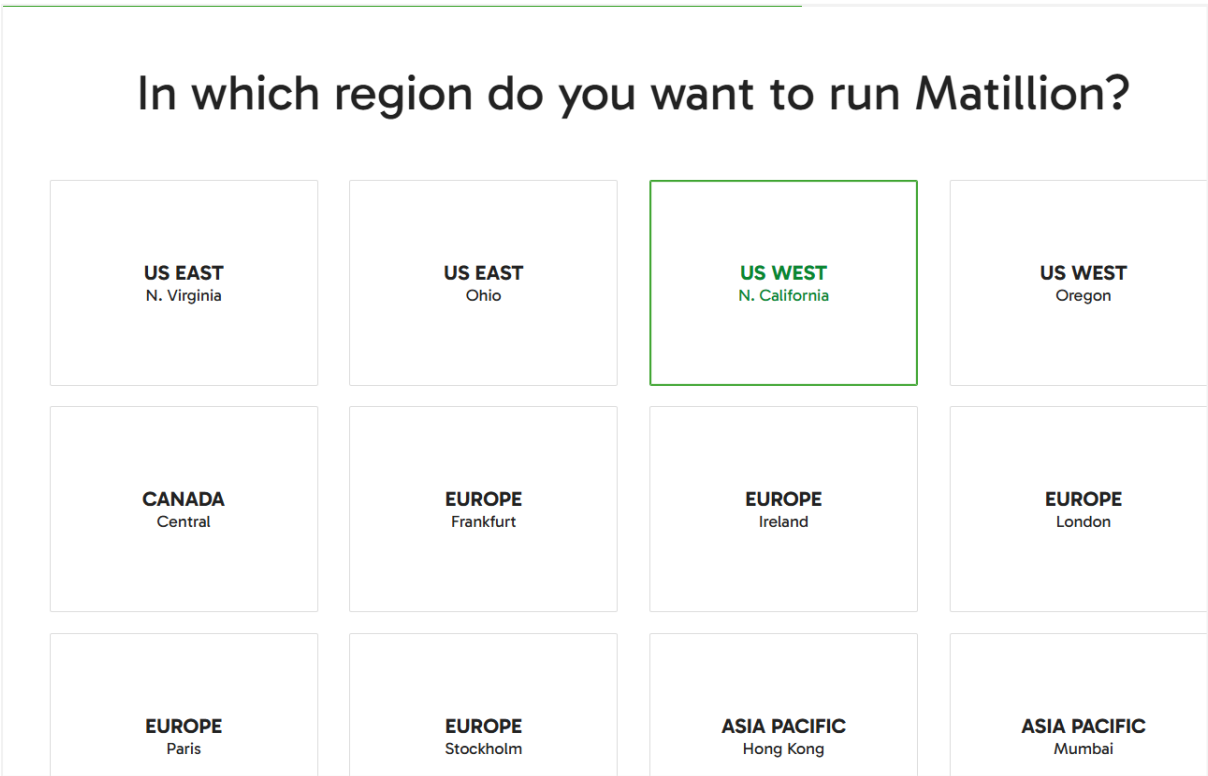

Figure 9: Region for EC2 instance running in AWS

Step 10: Then it will ask how we want to deploy to a VPC as we don't have any VPC so select Set up a new VPC.

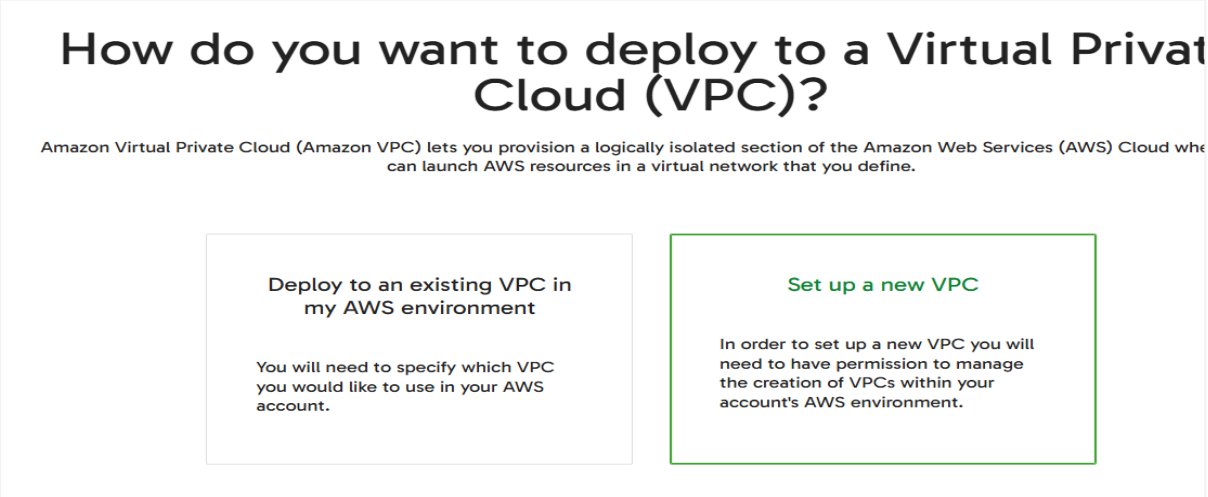

Figure 10: Set up new VPC

Step 11: Select Single Node for Matillion CloudFormation template.

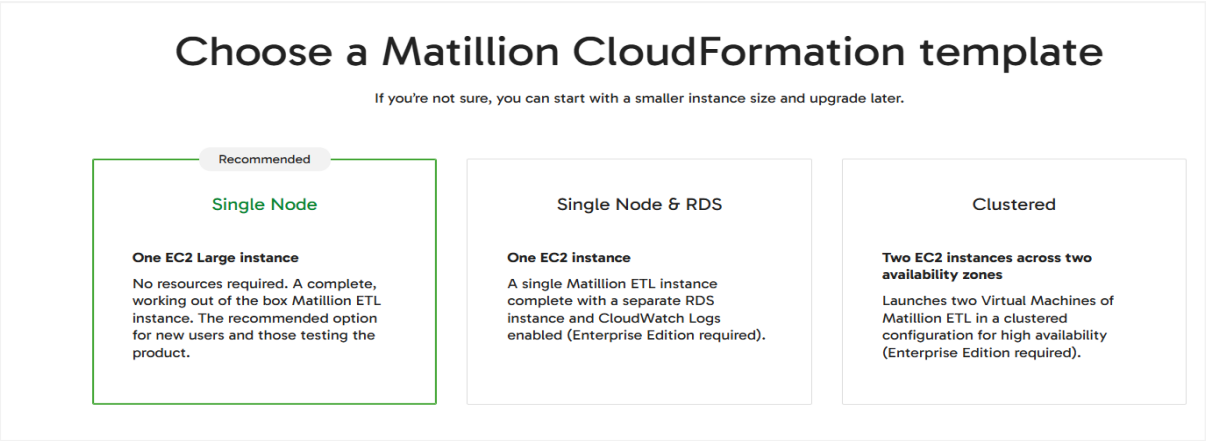

Figure 11: Select single node

Step 12: Now click on Continue with AWS.

Figure 12: Matillion and AWS Integration login

Step 13: You will be automatically redirected into AWS account. Enter the stack name.

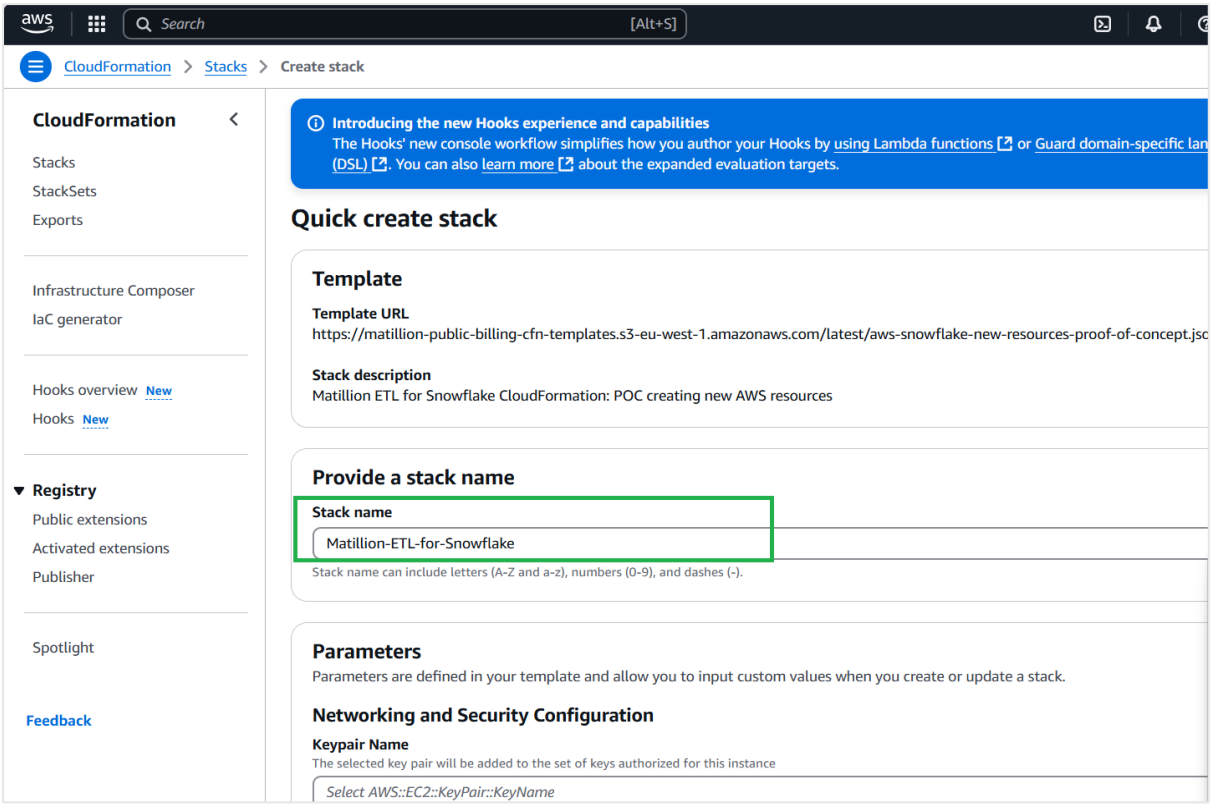

Figure 13: Create Stack

Step 14: Scroll down in parameter section. You need to select keypair.

Now for creating Keypair. Open AWS account on another tab and search EC2.

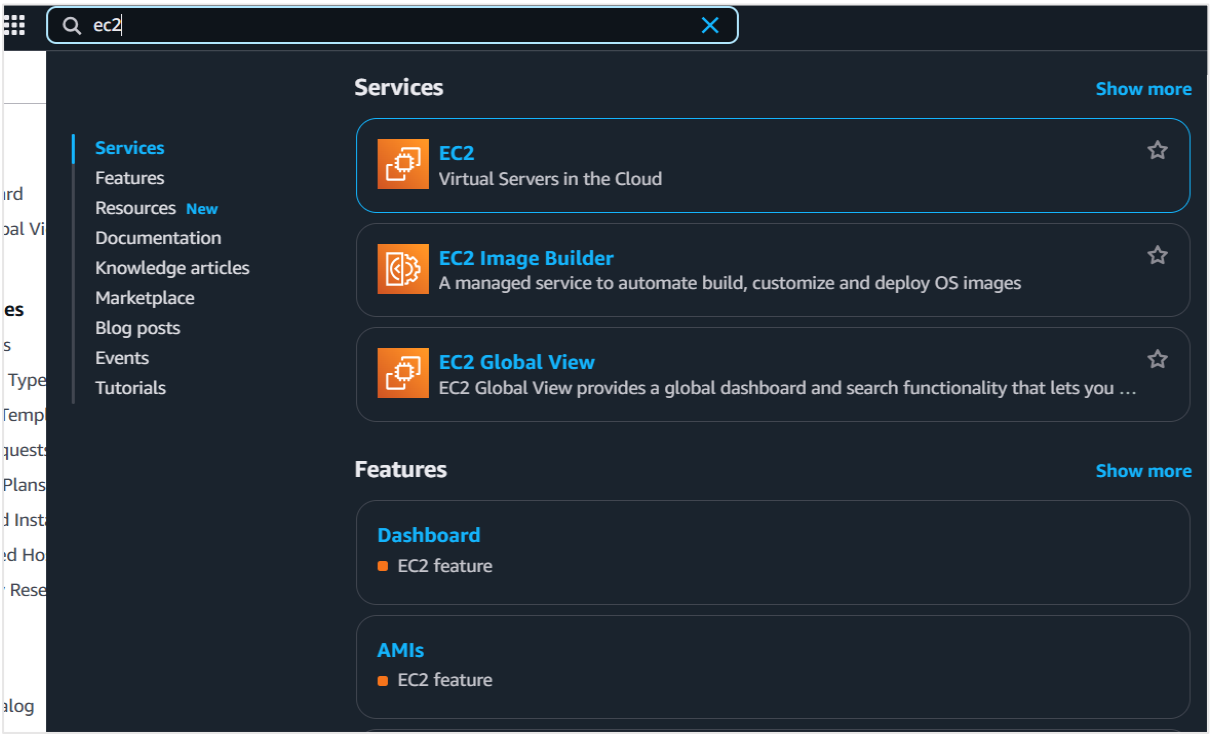

Figure 14:select EC2 for keypair

Step15: Click on Key Pair and click on create key pair.

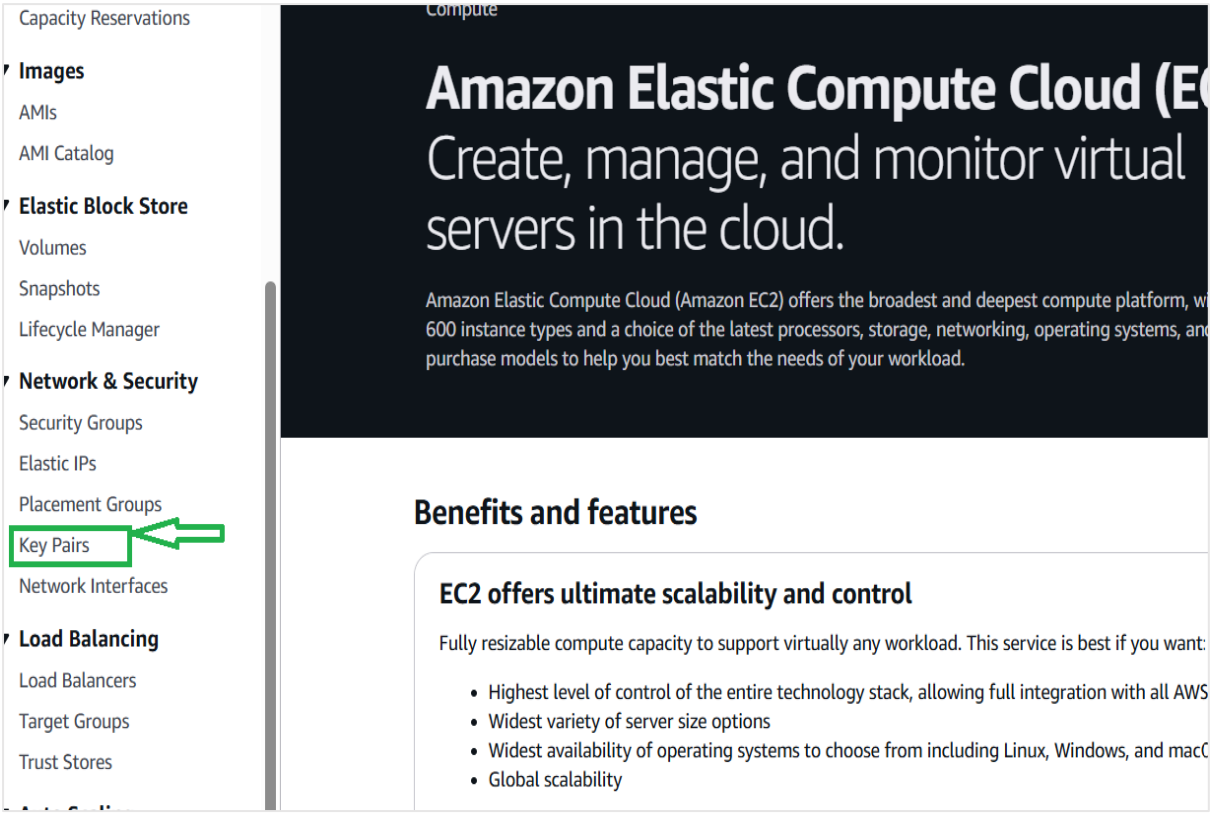

Figure 15: Select keypair

Step 16: Name the keypair and click on create key pair.

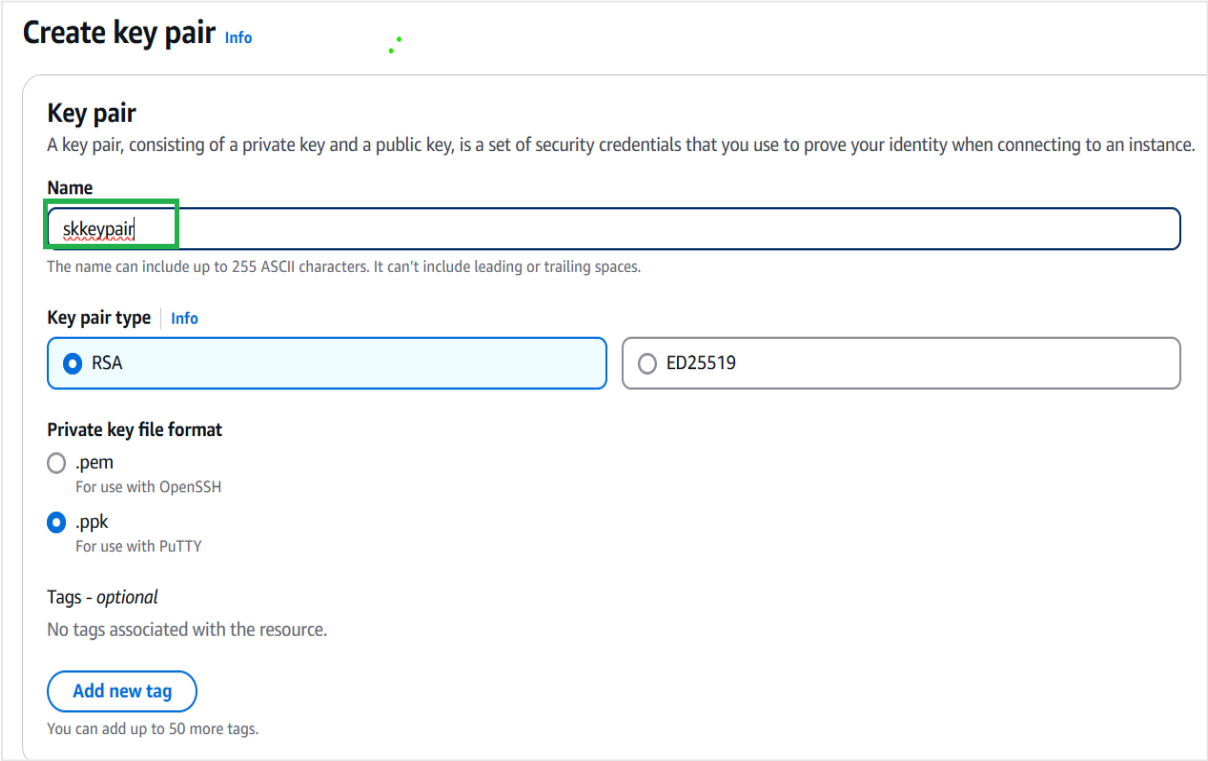

Figure 16: Name the keypair

Step 17: Once created it will be listed. And also downloaded in ppk format. (check region)

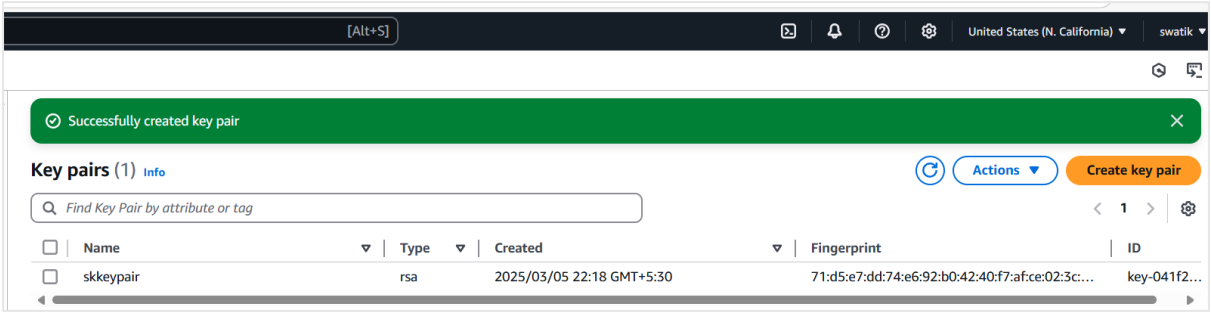

Figure 17: Keypair created

Step 18: Now back to previous tab. Go down in parameter section. Now click in Keypair drop there you will find the keypair name what you created previous. Select it.

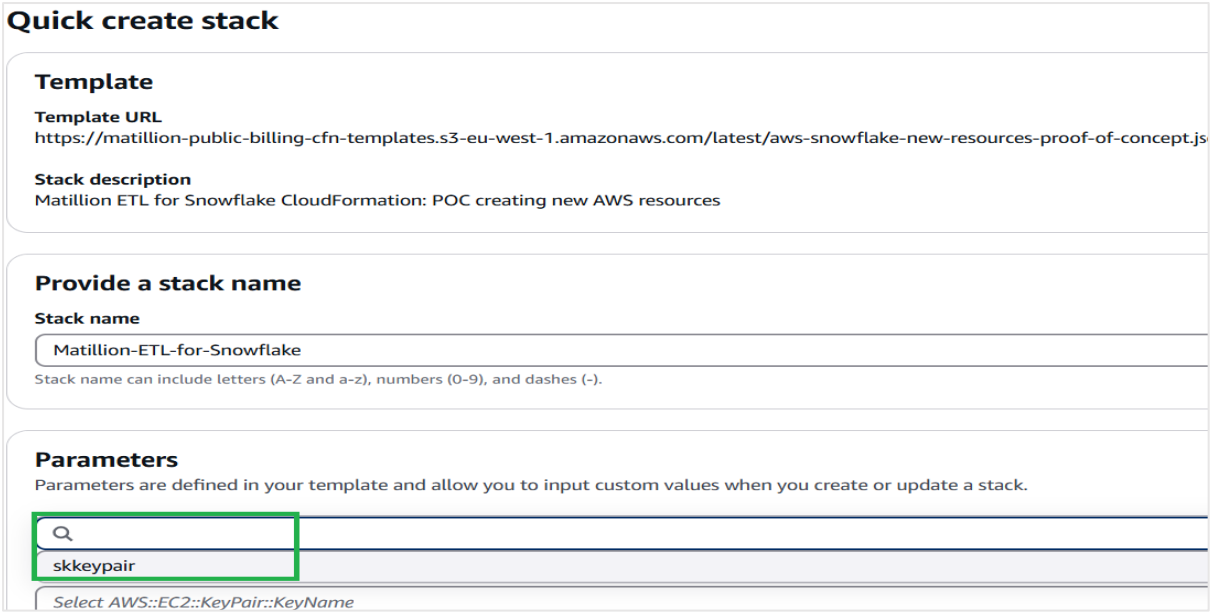

Figure 18: Quick create stack with keypair

Note: You may face issue that keypair that you created is not listing in parameter section. Wait for 2-3 minutes. If still it is not reflecting. Go to tab where you were asked to click on continue with AWS (step 12) It will again redirect to AWS account and now keypair will be listed.

Step 19: Then in AZ#1 select the region. Here giving us-west-1b.

In Inbound IPv4 CIDR section enter 0.0.0.0/0.

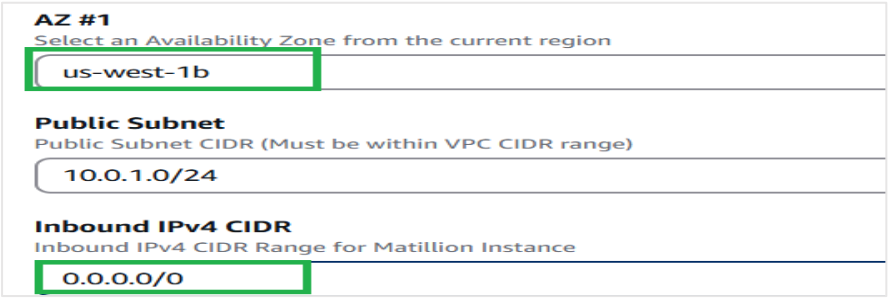

Figure 19: Provide zone

Step 20: Leave other section as it is and check for acknowledge and then **click on Create Stack**.

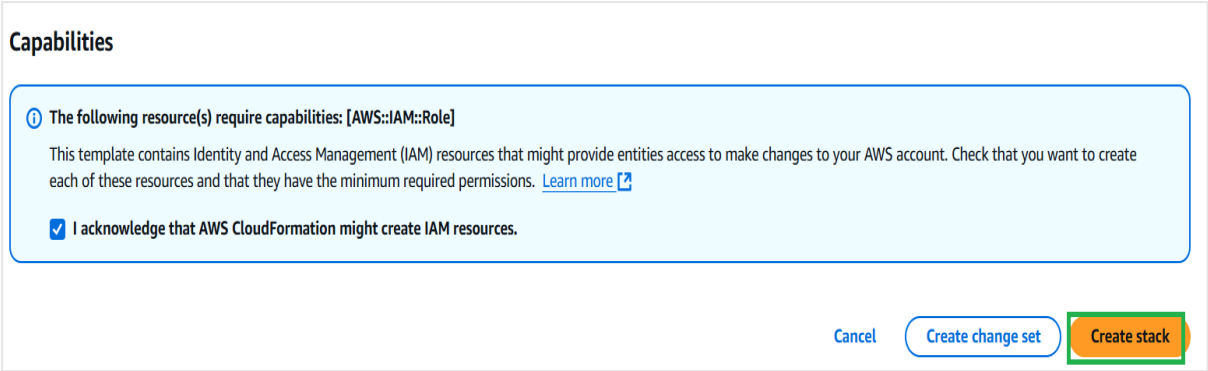

Figure 20: Check for acknowledge

It will take some time for creation.

Step 21: Stack got created.

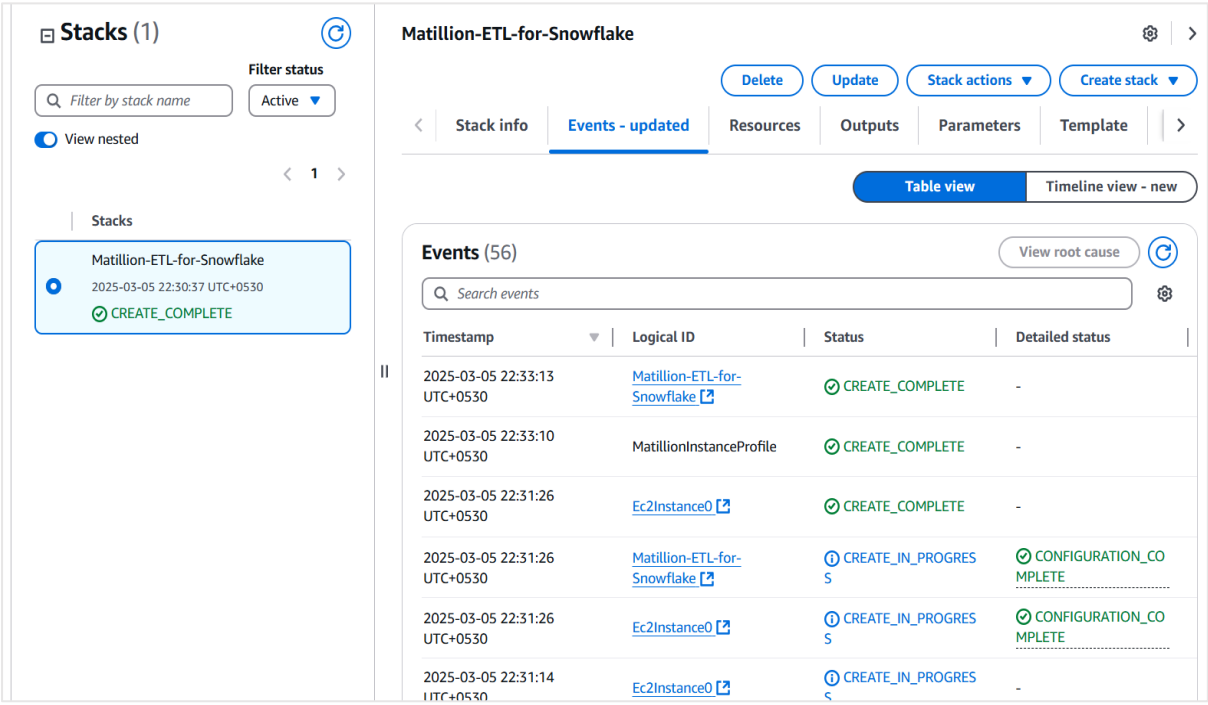

Figure 21Instance and stack are created

Step 22: After that, it will take 3 to 4 minutes for the instance to start. completing then go to the EC2 in services click on Instances. It will list the instances.

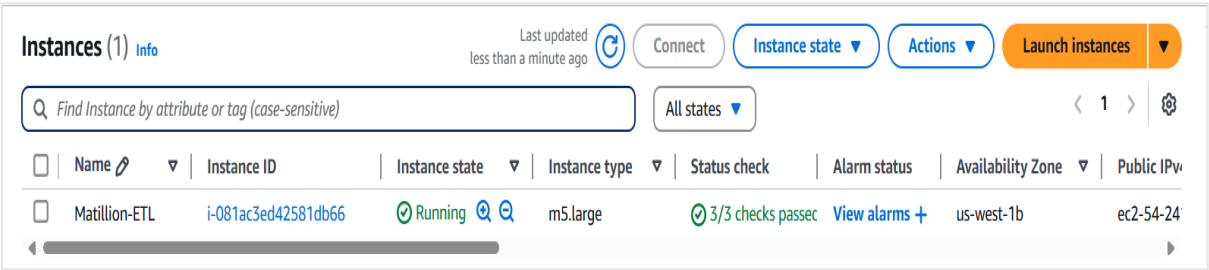

Figure 22: Instance running

Step 23: Click on the instances and copy the instance id and save it (it will used whenever matillion sign required) Now click on IPV4 Open address. It will redirect to other page for matillion login.

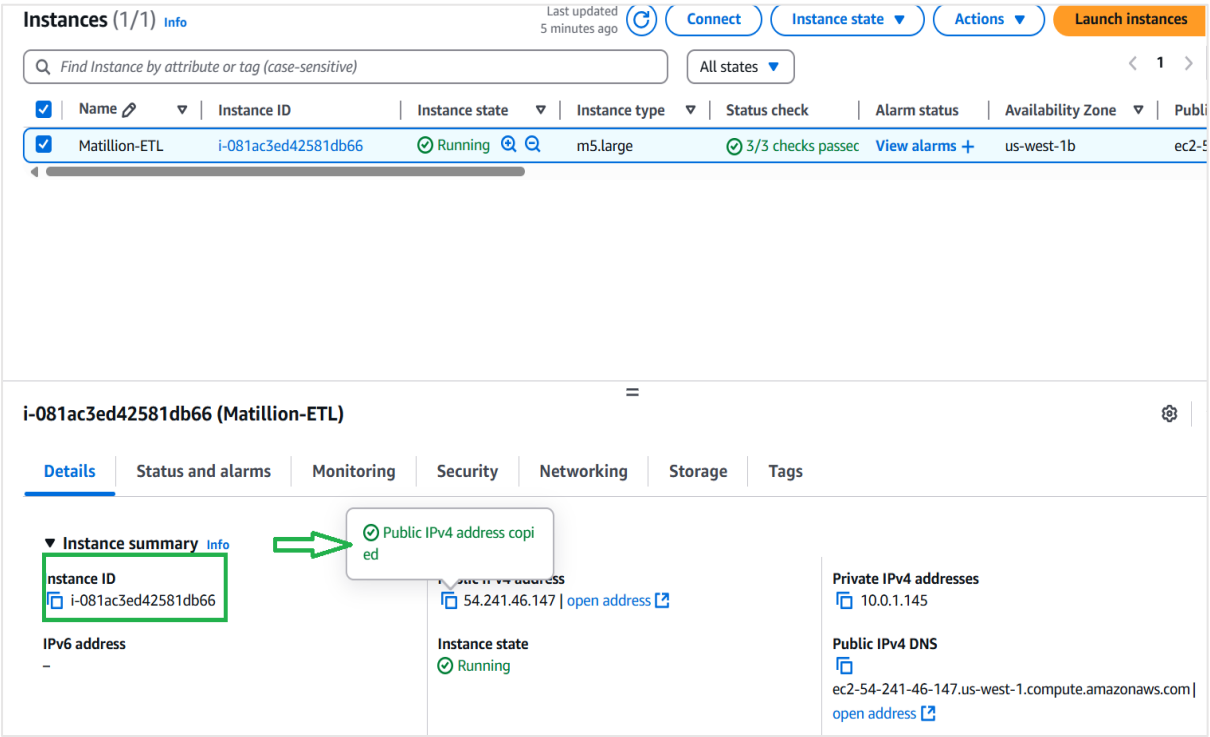

Figure 23: Copy Instance ID and open address

Step 24: Above address will open in new tab for another login for Matillion. Click on Advanced. And then continue.

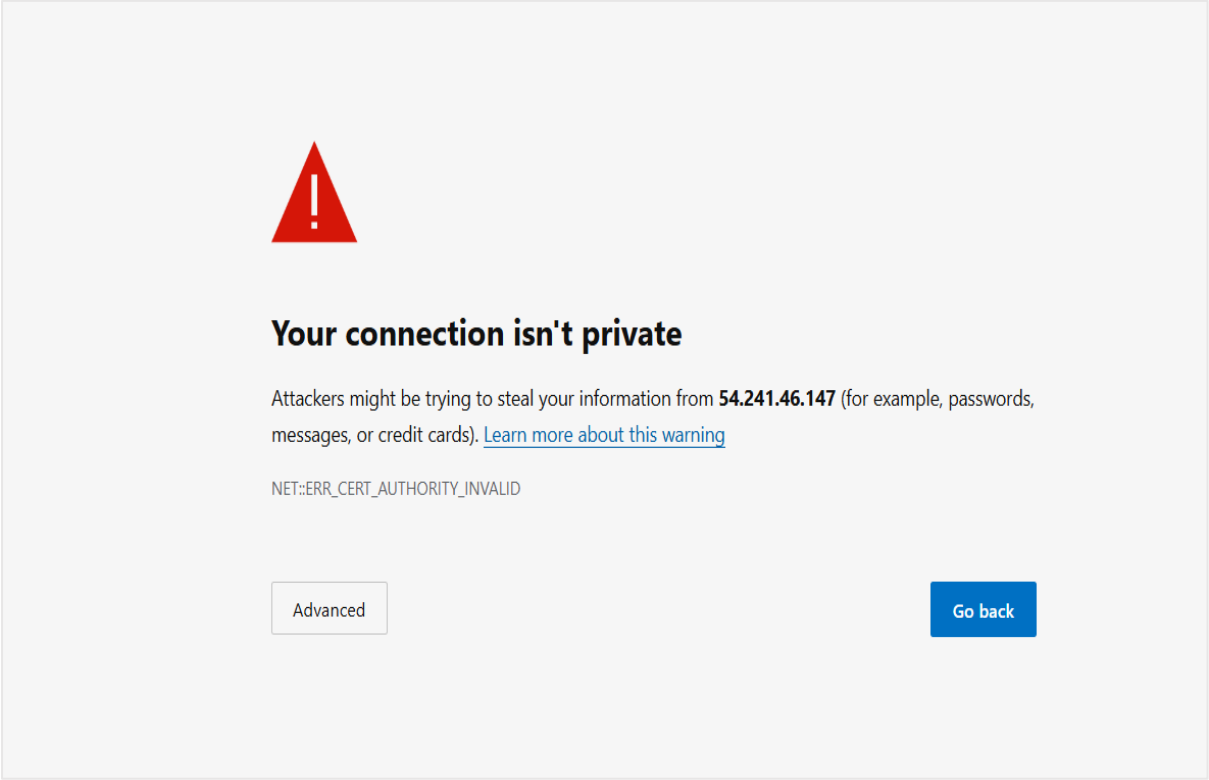

Figure 24: New browser for login

Step 25: Continue for login.

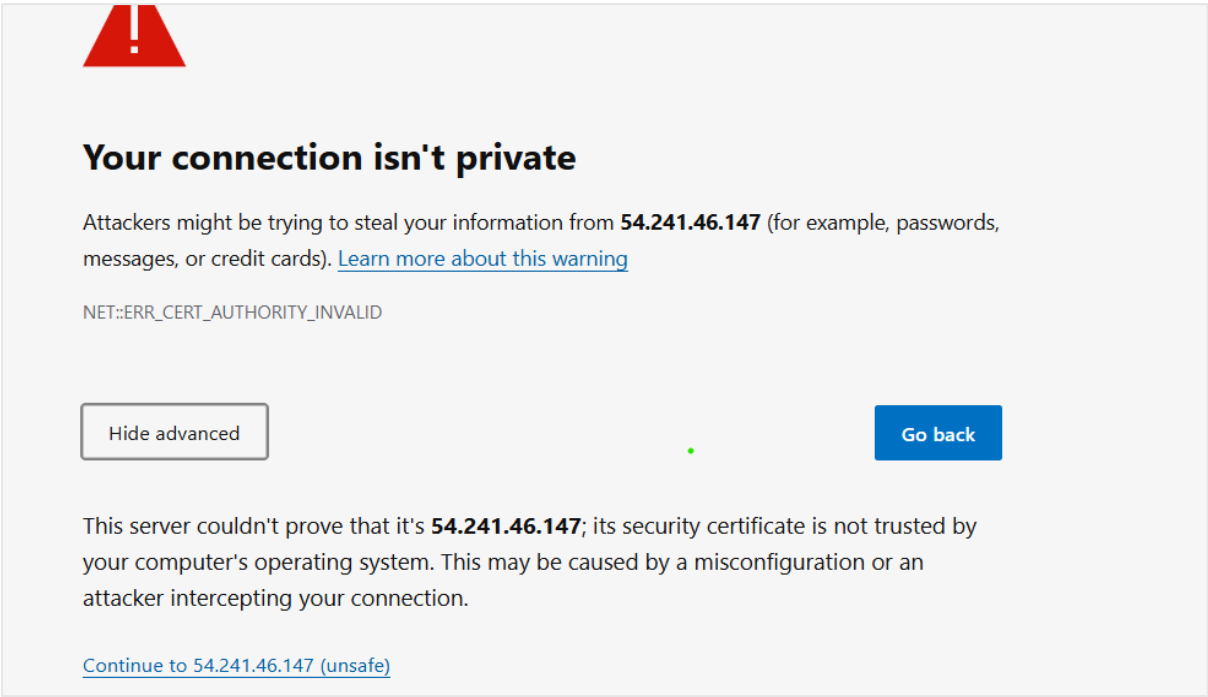

Figure 25: Continue for login

Step 26: Now login to Matillion.

User name: ec2-user (always it will remain same)

Password: Instance ID will be your password what you copied in step 23.

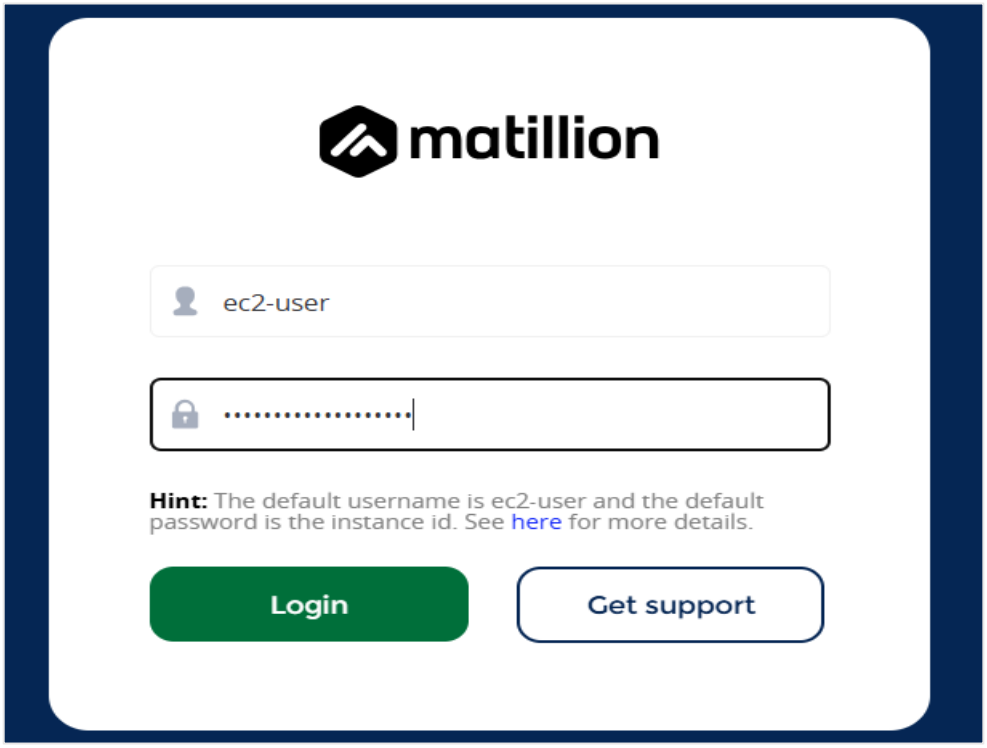

Figure 26: Matillion login

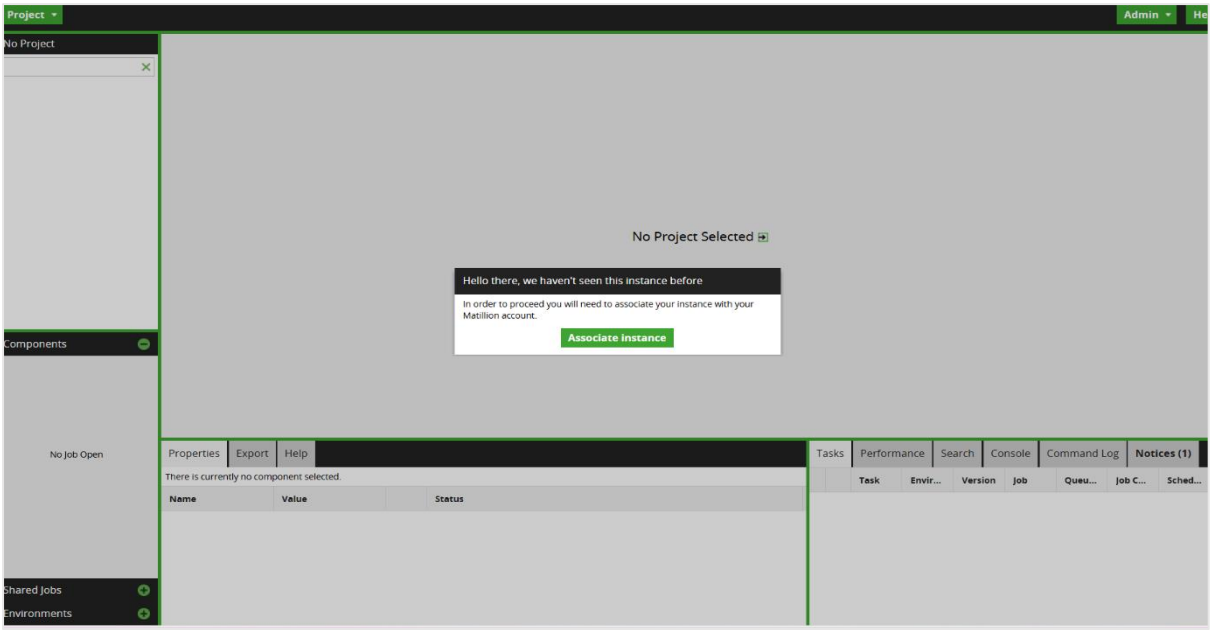
Step 27: Once login you will get redirected to matillion Dashboard. Here click on Associate Instance



Step 28: Now we need to create instance. Give Instance name and click on Associate.

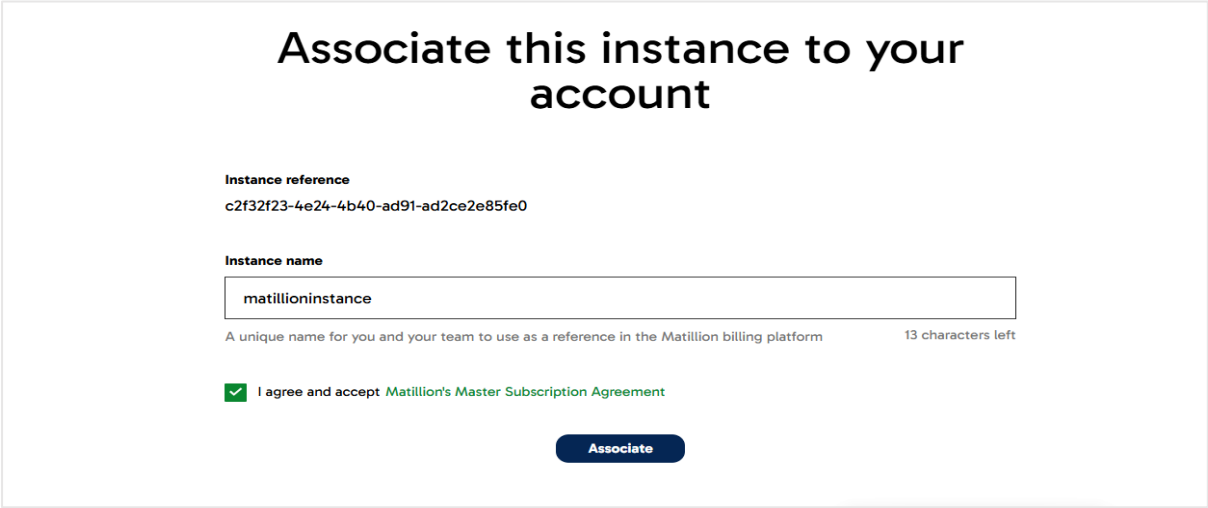


Figure 27: Name for Instance

Step 29: Click on **Launch Matillion ETL**.

Figure 28: Launch the Matillion

Step 30: Matillion finally got launched. Now for performing any action you need to create project.

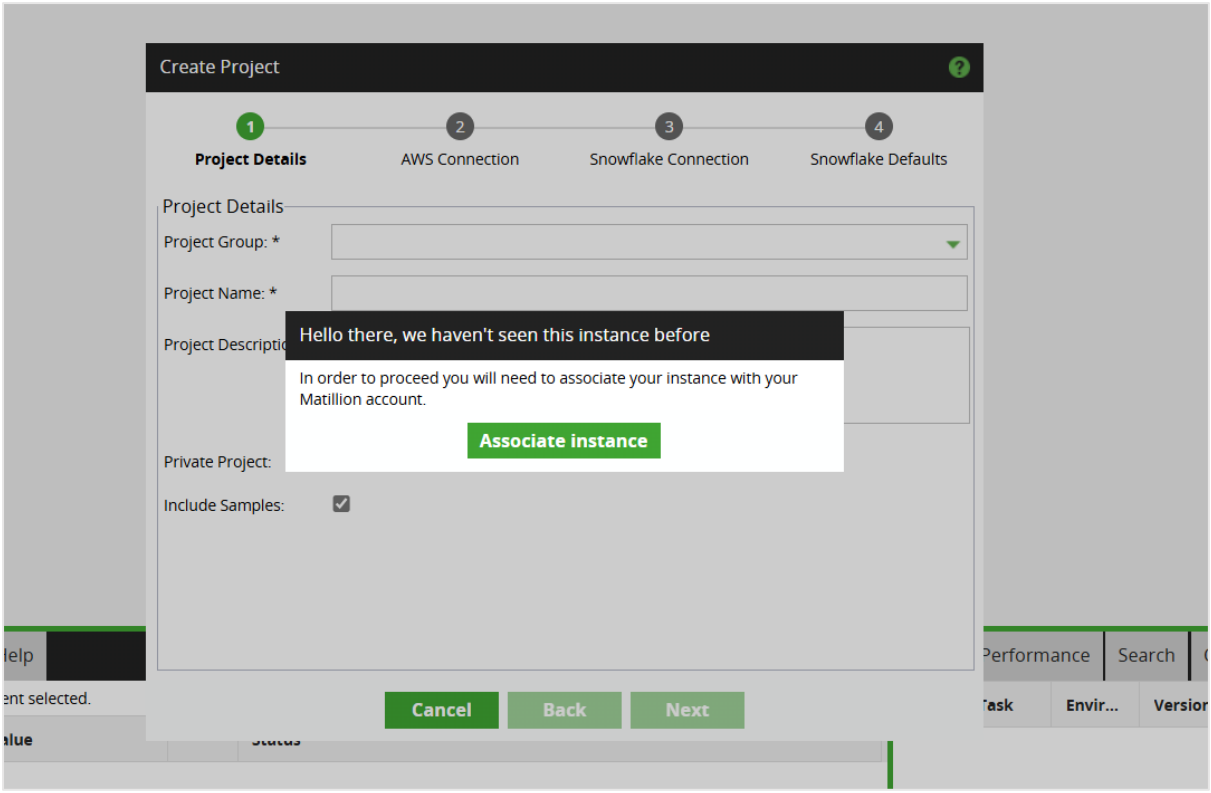

Figure 29: Matillion Dashboard Interface

In this way we are successfully created Matillion account using AWS EC2 instance.
